Green Globe Artichoke

- 1. GREEN GLOBE** — Grown for the undeveloped flowerheads which are cooked like asparagus. Hardy in Virginia and further south and should be largely grown; lasts for years. Pkt.

15c; 1/2 oz. .65; oz. \$1.20; 1/4 lb. \$3.00, postpaid.

JERUSALEM ARTICHOKE ROOTS. Write for prices.

Brussels Sprouts

Plant from March
till July.

Brussels Sprouts

(100 Days)—On the stalks are produced small cabbage-like heads that are as great a delicacy as cauliflower. Plant from March to July, transplanting 1 1/2 feet apart, and cultivate like cabbage. In the fall break off the leaves to give the heads more room. After hard frosts the flavor and delicacy are greatly improved. Easily grown and make a delicious dish. 1 ounce produces 2,000 plants.

- 87. LONG ISLAND IMPROVED.**
Pkt. 15c; 1/2 oz. 40c; oz. 70c;
1/4 lb. \$1.80, postpaid.

Broccoli

Plant in January and February.

- 86. CALABRESE GREEN SPROUTING (90 Days)**—The best sprouting broccoli for home and market garden. It produces a large center head about 5 or 6 inches in diameter which after being cut, numerous smaller heads appear on the side branches over a long period. Be sure to keep the green sprouts cut off before the flower buds open. Pkt. 15c; oz. 45c; 1/4 lb. \$1.10, postpaid.

Calabrese Green Sprouting Broccoli

- 84. ITALIAN SALAD (100 Days)**—The type generally grown in Delaware, Maryland and the Eastern Shore of Virginia. Yields an abundance of a most excellent salad. Pkt. 15c; oz. 25c; 1/4 lb. 65c; 1/2 lb. \$1.05; 1 lb. \$1.75, ppd.

Asparagus

Plant in March 1 to 1 1/2 inches deep in drills 2 feet apart; thin out to 3 inches and give frequent cultivation (soak the seeds for 24 hours). Transplant either in the fall or spring. An ounce will plant a 100-foot row; 2 pounds will make roots to set an acre.

- 3. WASHINGTON RUST-RESISTANT** — A heavy yielding rust-resistant asparagus that produces extra large, straight, deep green stalks with firm tips. No other variety is as free from rust.
Pkt. 15c; oz. 30c; 1/4 lb. 70c, postpaid.

- 4. PALMETTO** — An early prolific variety, producing an abundance of large, thick, very tender stalks.
Pkt. 15c; oz. 25c; 1/4 oz. 60c, postpaid.

Asparagus Roots

Set Out in February and March.

CULTURE—Prepare a trench 15 to 18 inches deep, put in plenty of well-rotted manure, covering it with a few inches of soil; set the roots 1 1/2 to 2 feet apart and cover 4 inches deep. In the fall, cut off the top growth, and apply stable manure. Early in the spring fork this in and apply ground animal bone. Do not continue cutting too long, as this exhausts the plants. 100 roots plant about 15x50 feet; 6,000 to 7,000 will plant an acre.

WASHINGTON Rust-Resistant—By mail postpaid, 25 for \$1.30; 50 for \$2.00; \$3.45 per 100. Not postpaid, 25 for \$1.00; 50 for \$1.75; \$3.00 per 100; \$25.00 per 1,000.

Asparagus Knife—By mail postpaid, 85c each.

SNAP BEANS

SNAP BEANS—An easy crop to grow and liked by everyone. When picked young and tender they have a taste far superior to snap beans that have matured and purchased at your local market. For a continuous supply, plant every two or three weeks commencing after all danger of frost has passed, and continue until about August 15th.

IDAHO GROWN Beans are sensitive to both cold and wet, so do not plant till the ground is warm. To have a continuous supply, plant every two weeks till the middle of August; further south they may be planted even later. Make the rows 2 to 3 feet apart, drop the beans 2 inches apart, and cover 1/2 to 2 inches deep. Give frequent but shallow cultivation up to blossoming time, not afterward, and never when the plants are wet. 1/2 pound plants 100 feet, 75 pounds an acre. Plant from April till August.

CABBAGE

PLANTING DATES (For the Vicinity of Richmond)

Spring Planting—Plant the early varieties in boxes indoors or in hotbed in January, February or March; for a summer crop plant the early varieties outside from April to June.

Winter Cabbage—Plant the late varieties in April, May or June and transplant when large enough.

CULTURE—When transplanting cabbage plants from the seed bed, set them in good rich soil that has been deeply dug and well manured and apply a fertilizer containing plenty of ammonia. The soil in the seed bed should not be richer than the soil where the plants are to grow, otherwise the growth will be checked. Set the plants as deep as the first leaf stems, give frequent and deep cultivation, drawing the earth to the plants at each working. Set the early varieties 18 inches apart in 2 to 2½-foot rows; the late varieties should be set 2 feet apart in 3-foot rows.

½ ounce will plant 100 feet of row and produces about 2,000 plants; 6 to 8 ounces will make enough plants to set an acre.

Celery

CULTURE—About 12 to 14 weeks before the plants are to be set in the garden plant 1/4 inch deep in boxes indoors, in hot-bed, or outside when the ground can be worked. Keep the beds thoroughly moist until the seeds germinate. Transplant from June till October, setting them 4 inches apart, earth up as they grow, but do not let earth get into the heart of the plant. Celery seeds germinate slowly; soak 24 hours before planting.

SELF-BLANCHING CELERIES

They grow so quickly and blanch so easily they should have a place in every home garden. Plant the self-blanching kinds for earliest use, and the winter varieties for general use later.

138. GOLDEN SELF-BLANCHING

(115 Days) Tender crispness, delicious nutty flavor and absence of strings make this a real delicacy. The stalks are broad, thick and heavy, and easily blanch to a rich, appetizing golden yellow. Easy to grow, for it blanches with much less earthing up than most celeries. Pkt. 20c; 1/4 oz. 30c; 1/2 oz. 50c; 1 oz. 85c; 1/4 lb. \$2.15, postpaid.

137. IMPROVED WHITE PLUME

(112 Days) The earliest and easiest to grow; being self-blanching, requires but little earthing up. Has a full heart that blanches pure white; the solid stalks are thick and crisp and have a rich nutty flavor. A fine celery for late summer and early fall use. Pkt. 20c; 1/4 oz. 30c; 1/2 oz. 50c; 1 oz. 85c; 1/4 lb. \$2.15, postpaid.

WINTER CELERIES

Of firmer texture, more compact and solid than the self-blanching kinds, and better keepers. For late summer and early fall use we recommend that a portion of your planting be a self-blanching kind, but for winter use that a winter variety be planted.

136. GIANT PASCAL

(135 Days) Large, thick stalks are crisp, have rich, nutty flavor and blanch easily and quickly. Heart is creamy yellow. Ideal for late fall and winter. Keeps splendidly. Blanches easily. Pkt. 20c; 1/4 oz. 25c; 1/2 oz. 40c; oz. 70c; 1/4 lb. \$1.80, postpaid.

141. CELERIAC or TURNIP ROOTED CELERY

(120 Days) Grown exclusively for its roots, which are fine for soups and stews or cooked and sliced as a salad. Roots keep all winter if packed in damp sand or put into kilns like beets. Plant and cultivate like celery but does not require earthing up. Pkt. 20c; 1/4 oz. 25c; 1/2 oz. 50c; oz. 85c; 1/4 lb. \$2.15, postpaid.

Collards

PLANT MARCH TILL AUGUST

CULTURE—One of the most popular Southern vegetables; largely used in place of cabbage. It is hardier and easier to grow than cabbage, can be grown on poorer soil and withstands insect attacks better. Although often planted during the spring and summer, the principal plantings are made in June, July and August, transplanted two feet apart in the row and given frequent cultivation. A most excellent vegetable for the late fall, winter and early spring. The flavor is improved by frost. Cultivate like cabbage.

146. CAROLINA HEADER

(80 Days) Heads up like a cabbage, yet is hardy enough to stand severe winters. It makes a nice sized head, with enough bottom leaves to protect it. Stalk is short, head is firm, the slightly savoyed leaves are spaced close together; a late seeder. You can grow it on land so poor that it would not produce a crop of cabbage. Pkt. 15c; oz. 45c; 1/4 lb. \$1.10; 1/2 lb. \$1.80; lb. \$3.00, postpaid.

143. NORTH CAROLINA SHORT STEM

145. WHITE or CABBAGE

(80 Days) Called cabbage-collard because of its resemblance to cabbage. Hardy and grows on the poorest soils. White and crisp as a cabbage. Pkt. 10c; oz. 25c; 1/4 lb. 65c; 1/2 lb. \$1.05; lb. \$1.75, postpaid.

GARDEN CORN

PLANT FROM APRIL TILL AUGUST

THE VARIETIES ON THIS PAGE ARE NOT SUGAR CORNS. THEY ARE HARDIER AND CAN BE PLANTED EARLIER THAN THE SUGAR CORNS AND MAKE EXCELLENT ROASTING EARS BEFORE THE SUGAR CORNS ARE READY.

CULTURE—Corn prefers a rich, warm, well-manured soil, but excellent garden corn may be raised on any good soil that has been deeply and thoroughly worked before planting. Plant the early varieties the last of March or early April. **SWEET CORNS ARE TENDER** and should not be planted till the ground is thoroughly warm, otherwise they are liable to rot. Give frequent and thorough but shallow cultivation, and continue plantings at intervals of about two weeks till July or early in August for a succession of roasting ears throughout the season. Plant during July or early in August for late roasting ears. 1/2 pound will plant 100 hills; 10 to 12 pounds plants an acre.

Trucker's Favorite Corn

153. HYBRID TRUCKER'S FAVORITE CORN

(78 Days) Has all the good qualities of Trucker's Favorite plus the advantages of hybrid corn, 50% greater yield, larger more uniform ears of better quality. Ears placed low on stronger stalks with deeper roots that resist storm, drought, insects and disease. It has beautiful tender, delicious roasting ears, with deep plump grain. Superior for home gardens or shipping. Pkt. 20c; 1/2 lb. 40c; lb. 70c; 2 lbs. \$1.20, postpaid.

150. BLAND'S EXTRA EARLY

(60 Days) If you want the first roasting ears in your neighborhood, you must plant Bland's—Bland's is pre-eminently the earliest of all garden corns, about a week earlier than Extra Early Adams. It makes an attractive ear of good size and fine quality; the grains are pearly white, plump, milky and tender. We recommend it to the private gardener and to those who grow it for market, for in earliness it is ahead of any garden corn and the size and appearance should make it a ready seller. Pkt. 15c; 1/2 lb. 35c; lb. 60c; 2 lbs. \$1.00, postpaid.

151. TRUCKER'S FAVORITE

(75 Days) Make a planting of Trucker's Favorite to make bigger ears to come in after Bland's Extra Early—There is no early garden corn so extensively grown in the South as Trucker's Favorite. It makes an ear about 10 inches long, with a good depth of plump, tender sweet grains. Although not a sugar corn it makes the finest roasting ears. We believe nearly 90 per cent of the table corns shipped North by truck growers is Trucker's Favorite; on the Richmond market it outsells all garden corns and brings top prices. Unfortunately, the name "Trucker's Favorite" appealed to many seedsmen as a good one, and it has been applied to many other corns. To have the real Trucker's Favorite corn order from us, who originated it. Pkt. 15c; 1/2 lb. 30c; lb. 55c; 2 lbs. 90c, postpaid.

155. NORFOLK MARKET

(75 Days) Not as early as Big Early Adams, but makes a larger ear, about 9 inches long. The grains are fairly deep, and when at roasting ear stage are tender and milky. It is hardier than any of the sugar corns, withstands cold ground better and can be planted much earlier. If not used for roasting ears it makes a good yielding corn for feeding. Pkt. 15c; 1/2 lb. 30c; lb. 55c; 2 lbs. 90c, postpaid.

152. EXTRA EARLY ADAMS

(65 Days) The earliest of all white corns except Bland's Extra Early; makes a small ear and stalk. Can be planted close together. Grains are white and smooth; very hardy and can be planted earlier than any of the sugar corns. Pkt. 15c; 1/2 lb. 35c; lb. 60c; 2 lbs. \$1.00, postpaid.

154. IDEAL or BIG EARLY ADAMS

(70 Days) Intermediate as to earliness and size of ear, between Bland's Extra Early and Trucker's Favorite. Hardier than any of the sugar corns and can be planted earlier. The ears are 8 to 9 inches long, with 12 or more rows of round white grains to the ear. Grows about 6 feet high, allowing close planting; early and hardy. This is a good corn to come in after Bland's Extra Early and before the bigger-eared Trucker's Favorite. Pkt. 15c; 1/2 lb. 35c; lb. 60c; 2 lbs. \$1.00, postpaid.

Leek

PLANT FEBRUARY, MARCH AND SEPTEMBER

CULTURE—Superior to onions for soup flavoring, etc. Plant early in the spring in a light, rich, moist soil in drills half an inch deep. When 6 to 8 inches high, trim off the tops and roots and transplant 3 to 4 inches apart in 18-inch rows setting the plants in the ground up to their center leaves, and earth up to blanch the necks. ½ ounce will plant about 100 feet of drill.

227. LARGE FLAG

An early popular strain, having long thick, white, well-blanching stems; 1½ inches thick and 7 to 10 inches long with large, medium drooping leaves. Pkt. 15c; ½ oz. 45c; oz. 75c; ¼ lb. \$2.00, postpaid.

CANTALOUPE

COLORADO GROWN—PLANT IN MAY AND JUNE

CULTURE—Prepare hills, 4 to 6 feet apart, in a rich, moderately dry sandy soil, using well-rotted manure. When frost is over, plant 10 to 12 seeds in each hill about one inch deep, and when well up, thin out, leaving four strong plants to the hill. Pinch off the ends of the vines when about a foot long; this will make them strong and bear more freely. Give frequent but shallow cultivation till the vines cover the ground. One ounce plants 50 hills; two pounds to the acre.

Extra Early Hanover

247. EXTRA EARLY HANOVER

(70 Days) The earliest cantaloupe in cultivation, ripening fully ten days ahead of the Rocky Ford. Notwithstanding its extreme earliness, it makes a large melon, round, slightly flattened at the ends and well netted. The flesh is green, thick and can be eaten to the skin. In earliness, Extra Early Hanover is without a competitor. Pkt. 15c; oz. 45c; ¼ lb. \$1.10, postpaid.

249. EARLY KNIGHT (Maryland or Sweet Air)

(80 Days) In earliness Knight ranks next to our Extra Early Hanover and Early Rocky Ford. A happy combination of earliness, productiveness and quality. Nearly oval shaped, densely netted, of good size with thick green flesh; very luscious and ripens close to the skin. Uniform in size, averaging 7 to 8 in. long, 5 to 6 in. across. Pkt. 15c; oz. 35c; ¼ lb. 90c, postpaid.

256. HALE'S BEST JUMBO STRAIN

A larger strain than the well known Hale's Best No. 36, largely grown for roadside markets and delivery by truck to city markets. The melons are slightly oval, weigh 5 to 6 pounds, heavily netted and more ribbed than No. 36. The salmon flesh is thick, sweet and of excellent quality. Pkt. 15c; oz. 35c; ¼ lb. 90c, postpaid.

260. HALE'S BEST No. 36 or H. B.

This is probably more generally grown commercially than any other melon. It has held its place as a shipper on account of its earliness, thick meat, fine texture, delicious eating quality and its ability to stand up under hard shipping conditions. About 6 inches long, nearly round, densely covered with netting and almost entirely without ribs. It is also a splendid home market melon. Pkt. 15c; oz. 35c; ¼ lb. 90c, postpaid.

257. PRIDE OF WISCONSIN

(90 Days) Splendid variety either for home gardens or market gardeners. Fruits are nearly round, very coarse netting, orange flesh, solid and thick with very small seed cavity. Very sweet and of fine flavor. Pkt. 15c; oz. 35c; ¼ lb. 90c, postpaid.

248. WOOD'S PERFECTION

(80 Days) The most delicious of all orange-fleshed cantaloupes; beautiful in appearance, but the deliciously sweet spicy flavor of its fine-grained, solid flesh is its outstanding characteristic. There is no trace of stringiness; the flesh is so thick that the seed cavity is unusually small; it is covered with a lace-like netting over the entire melon. We recommend it to everyone as a melon of surpassing quality and flavor. Pkt. 15c; oz. 45c; ¼ lb. \$1.10, postpaid.

245. HONEY DEW

(110 Days) The smooth skin is creamy white when ripe and so tough that the melon is practically sealed up and will keep for a month or more. Allow 3 months to mature, pull when the blossom end is slightly soft, and keep a few days before serving. Has a flavor distinct from the flavor of cantaloupe. Pkt. 15c; oz. 35c; ¼ lb. 90c, postpaid.

262. BANANA

(90 Days) Banana shaped and has the banana flavor; grows 15 to 20 inches long by four to six inches in diameter; has thick orange flesh with delightfully sweet flavor. Pkt. 15c; oz. 35c; ¼ lb. 90c, postpaid.

250. WOOD'S EARLY ROCKY FORD

(75 Days) Selected for earliness; a week to ten days earlier than the original Rocky Ford, like it in shape, but a little larger. The melons are heavily netted, have small seed cavity, firm and thick green flesh, and are attractive in both shape and color. The flavor is deliciously sweet and spicy. It is early, prolific and of fine quality. This is just the melon to follow our Extra Early Hanover. Has spicy flavor found only in the best cantaloupes. Pkt. 15c; oz. 45c; ¼ lb. \$1.10, postpaid.

263. GLASS MELON or Mango

(90 Days) For preserving, sweet pickles, mangoes stuffed like peppers, pies, and may be sliced and fried like egg-plant. Pkt. 15c; oz. 65c; ¼ lb. \$1.60, postpaid.

Hollybrook Luscious Cantaloupe

261. HOLLYBROOK LUSCIOUS

(90 Days) For flavor and size, this is the king of all melons. Too large to be profitable for the market—they often weigh 15 to 20 lbs.—they are ideal for home use; one melon is enough for one family. The flavor is equal to that of a Honey Dew melon. Continues bearing till cold weather and holds its splendid quality up to the very last. Pkt. 15c; oz. 45c; ¼ lb. \$1.05, postpaid.

WATERMELONS

SOUTHERN GROWN

Prepare hills 8 feet apart each way by working in thoroughly rotted manure, or poultry droppings—rich ground gives the plants a good start before the insects attack them. When the ground is warm plant 6 or 8 seeds to the hill, covering an inch deep and, when well up, thin out, leaving three strong plants to each hill. One ounce will plant 30 hills; 3 pounds one acre.

Although bigger melons have been introduced, Florida Favorite holds its splendid reputation for uniformly good quality and is a prime favorite, especially for the home garden and for shipment to nearby markets. Pkt. 15c; oz. 25c; ¼ lb. 65c, postpaid.

WILT RESISTANT WATERMELONS

Wilt is the greatest menace to watermelon production in the South and varieties resistant to fusarium wilt have become a real necessity. Wilt is a soil-borne disease and lives in the land for ten to fifteen years. The only remedy is to plant wilt-resistant varieties.

285. LEESBURG or Wilt Resistant Kleckley's Sweet

(90 Days) In every way fully equal to our standard strain of Kleckley's Sweet in quality and size, with the distinct advantage of being wilt resistant. Pkt. 15c; oz. 45c; ¼ lb. \$1.00, postpaid.

274. WILT RESISTANT DIXIE QUEEN

Is highly resistant to Fusarium Wilt, which has become so prevalent in some parts of the country as to render growing watermelons extremely hazardous. Melons are very superior in quality, being sweeter, with more luscious, and deeper, richer red flesh. Distinctive characteristics are larger seed, greater vigor and hardness of vines, which are less affected by adverse weather conditions, and denser foliage giving greater protection to melons against sun-burn. Pkt. 15c; oz. 45c; ¼ lb. \$1.00, postpaid.

281. CONGO

(90 Days) One of the leading varieties for the home garden, also the commercial grower. It is highly resistant to Anthracnose; if this is a factor in your area, you should by all means try Congo.

The melons are similar in size and shape to Garrison, weighing 32 to 40 pounds. The rind is dark green with darker green stripes, very tough, which makes it resistant to breakage in shipment. The flesh is bright red, medium grain, sweet, and ripens well out to the rind. The white seeds are moderately large with black tip and side markings; a heavy yielding variety, though a light seeder. Pkt. 15c; oz. 50c; ¼ lb. \$1.25, postpaid.

KEEP FREE OF WEEDS.

ONION PLANTS—see page 34.

Parsley

CULTURE—Plant in February, March or early in April half an inch deep, in rows 12 to 18 inches apart, pressing the soil after planting. Slow to germinate, sometimes 2 or 3 weeks in coming up. Germination may be hastened by soaking 24 to 36 hours before planting, or by covering the rows with boards to retain the moisture. A few radish seed should be sown in the row with parsley to mark the row and allow early cultivation. The radishes can be pulled early and not interfere with the parsley. If dried and rubbed to powder it may be bottled for use later. An ounce plants 100 feet.

Champion Moss Curled Parsley

314. CHAMPION MOSS CURLED

(70 Days) The most improved strain; is beautifully curled and crimped, and is the best for garnishing and flavoring. If cut when about 3 inches high, it starts a new growth that will be better curled and a brighter color. Pkt. 15c; oz. 30c; 1/4 lb. 80c, postpaid.

Plant 1/2 inch deep in a rich, deeply worked, sandy loam, in rows 18 to 24 inches apart, and when 2 inches high thin out to 4 to 6 inches apart. Parsnips germinate slowly, especially in dry weather; plant a few radish seeds with them to mark the row for early cultivation. Parsnips are improved by frost, so they can be dug as wanted, or stored for winter use. Do not use fresh stable manure on parsnips. An ounce plants 100 feet of drill; 5 pounds plant an acre.

Sugar or Hollow Crown Parsnip

GARDEN PEAS

(VARIETIES MARKED WITH STAR (*)
ARE WRINKLED)

PLANT FEBRUARY TO MAY AND IN AUGUST

Peas do best in a light, rich, loamy soil that has been liberally manured the previous season. Plant the smooth varieties as early as the ground can be worked. The wrinkled peas are not as hardy and should be planted later, but they are sweeter and better flavored. For a continuous crop, plant every two weeks—as late as August for a late crop. Plant 2 inches deep in double rows 2 inches apart, 2 to 3 feet between the double rows; stake the tall varieties with brush and work toward them two or three times during growth. Gather as fast as they are fit to use, otherwise they will stop bearing. 1 lb. will plant 100 ft. row; 100 lbs. per acre.

A 5-10-5 fertilizer gives the biggest yield. DO NOT PLANT IN AN OLD SEED BED.

Wood's Famous Brimmer Tomato

437. WOOD'S FAMOUS BRIMMER

1st IN QUALITY (110 Days)
IN SIZE
IN PRODUCTIVENESS

There is no tomato that can compare with Brimmer. Although it is the largest and most productive of all tomatoes, this statement refers particularly to the quality, flavor and meatiness of the fruits that are without the acidity so objectionable in some varieties.

QUALITY

In the breeding of our Brimmer, quality is our first consideration. The flavor is delicious and they are so free of acid that they may be eaten with impunity by those to whom acid tomatoes bring distress. For slicing, no tomato can compare with Brimmer. The slices are usually large enough to fill an ordinary salad dish.

SIZE AND WEIGHT

Brimmers measuring 15 to 16 inches in circumference, and weighing 2½ pounds or more, are not at all unusual. They are all meat, have very few seeds and no core.

PRODUCTIVENESS

Although a few days later than the very early varieties, the enormous size and remarkable yield more than make up for the few days difference in earliness. The vines bear a tremendous load of fruits right up to frost, and the fruits are large till the end of the season. Brimmer not only makes big tomatoes, but a lot of them.

HOW TO GROW BRIMMERS

To make the biggest tomatoes and the largest yield, train to a single stem, tie the vines up to strong five-foot stakes; this gives them ample room for development, plenty of sunlight, holds them off the ground and enables the vines to continue to yield a constant supply right up to frost. Pkt. 20c; ¼ oz. 60c; ½ oz. \$1.10; oz. \$1.75; ¼ lb. \$4.30, postpaid.

425. JUNE PINK

(95 Days) Sometimes called Pink Earliana—The earliest pink tomato. Except in color, it is very much like Spark's Earliana, almost as early, rather smoother, and has the advantage of a longer fruiting season, the vines continuing to bear until frost. The fruit is medium size, uniform, smooth and attractive, without cracks and green cores. A first-class tomato for the earliest crop. A fine shipper. Pkt. 15c; ¼ oz. 40c; ½ oz. 70c; oz. \$1.10; ¼ lb. \$2.70, postpaid.

436. IMPROVED PONDEROSA

(Beefsteak Tomato)

(110 Days) Before our Brimmer was introduced Ponderosa was the outstanding tomato in size and quality. Unfortunately, the old Ponderosa was rough and uneven. In our improved strain the tendency to produce rough fruits has been overcome without in any way sacrificing the many fine qualities that made this fine tomato famous. The plants are healthy and luxuriant, blight-resistant and continuous and abundant bearers. The fruits are practically all meat, with exceptionally few seeds. If trained to a single stem, tomatoes weighing a pound or more are not unusual. Color, purplish pink. Pkt. 15c; ¼ oz. 45c; ½ oz. 80c; oz. \$1.45; ¼ lb. \$3.60, postpaid.

438. STONE (Bright Scarlet)

(110 Days) One of the heaviest and most solid of the large, good quality tomatoes. Fine for main crop and deservedly one of the most popular. Is of large size, smooth, solid and meaty; stands up well under summer heat, ripens evenly to the stem without cracking. Ours is an extra fine strain. Beware of cheap cannery stocks of Stone. Pkt. 15c; ¼ oz. 25c; ½ oz. 40c; oz. 65c; ¼ lb. \$1.60, postpaid.

435. GREATER BALTIMORE (Bright Scarlet)

431. STOKECROSS No. 5 F². Generation of the Hybrid

82 days to maturity after transplanting. This wonderful tomato has many points of similarity with Stokes-cross No. 4, but has heavier foliage which is an added advantage under burning sun. Yields exceeding 30 tons per acre have been recorded because of its long harvest season. The interior of Stokecross No. 5 is very solid, making it satisfactory both as a long distance shipper and as a canner. Pkt. 25c; ¼ oz. \$1.50; ½ oz. \$2.25; oz. \$5.00, postpaid.

Yellow Tomatoes

441. GOLDEN PONDEROSA

It is really a very early Marglobe, has much the same shape, color and size, thickness of walls, but almost as early as Earliana yet deep, solid smooth, of good size and almost seedless. Resistant to wilt and nail-head rust. Pkt. 15c; ¼ oz. 30c; ½ oz. 55c; oz. 90c; ¼ lb. \$2.15, postpaid.

WOOD'S QUALITY FLOWER SEEDS

Sow the Seeds

either broadcast or in rows, and COVER LIGHTLY—a good general rule is to cover four to six times the size of the seeds—and press the soil firmly. SMALL SEEDS CANNOT COME UP IF COVERED TOO DEEP. Very fine seeds should be sown on the surface and PRESSED INTO THE SOIL. To have the earliest blooms, flowers that stand transplanting should be sown early in boxes indoors. Water with a fine spray, do not let the soil dry out, do not keep the plants saturated, as they may damp off. When three or four leaves have formed transplant one inch apart in boxes, or in the open ground if warm enough.

The Soil

best suited to flowers is a light rich loam, made as fine and smooth as possible. If heavy, mix with sand to lighten and make it friable. Many seeds are very small and require a fine seed-bed.

HALF HARDY and TENDER FLOWERS should not be sown or transplanted outside until the weather is settled and warm.

HARD SHELLLED SEEDS like Canna, Evening Glory, Brazilian and Japanese Morning Glory should have a hole filed through the outer shell, or soaked in warm water 36 hours before planting.

No annual will produce a more lavish profusion of blooms for so long a time, nor more variety of color than nasturtiums. They begin blooming early and yield a continuous display till frost. The more you cut the flowers the more they will bloom. You can grow them in any soil; in fact, they do well in soils too poor to support other plants. Rich soil produces foliage at the expense of the blooms. Plant an inch deep after the ground becomes warm, dropping 2 seeds every three inches. Do not transplant. Do not water too freely.

ORDER EARLY AND BE SURE

Our tobacco seed production is from State Experiment Stations's foundation seed. Grown, rogued and harvested by an expert, who produces and handles tobacco seed with the technical care, precaution and general know-how that only experience and study can give. This assures you of getting top quality seed, and at fair prices.

PLANT BED MANAGEMENT

Choose a well drained soil, high in organic matter, that lies to the east or south, and is protected from the wind. Sow one level tablespoonful per 100 square yards. Plant 100 square yards for each 1 to 2 acres to be planted. Beds 2 yards wide can be worked much easier than wider beds. Weeds can be controlled by the correct use of chemicals.

FERTILIZER

1 to 2 pounds of 4-9-3 plant bed fertilizer to the square yard should be thoroughly worked into the top 2 inches of soil. Mix one level tablespoon of seed with a few pounds of fertilizer and sow uniformly over 100 square yards. Settle the soil with a light tamper. Use good tight side walls and cover with a cloth. In Virginia, sow beds by February 10th. Farther south, beds should be sown earlier.
